Software Engineer (Backend)

Backend software engineer with 3 years of experience across Ruby on Rails and Python/Django, building reporting, data-export, file-upload, and API integration features for production business systems.

Skills

Backend & Data

- Ruby on Rails, ActiveRecord, Python, Django, Django REST Framework
- PostgreSQL, MySQL, SQL query optimization, REST APIs
- Shopify API, Google Workspace API, ERPNext integration

Front-end

- HTML, CSS, JavaScript, Stimulus, Vue 3, Bootstrap, Tailwind CSS, Jinja

Tools & Practices

- Git, Heroku, Postman, unit testing, Shrine, CarrierWave, Axlsx
- AI-assisted development and code review (Claude, ChatGPT)

Experience

Junior Software Engineer | Digiteer Software Studio **Jan 2025 – Oct 2026**
Makati, Philippines (Hybrid) · Promoted from Software Engineer Intern (Aug 2024 – Dec 2024)

- Built and maintained Ruby on Rails backend features for internal reporting, filtering, and data-export systems, using ActiveRecord scopes and Axlsx for Excel/CSV output.
- Refactored controller and model code with senior engineers to improve SQL query performance on reporting pages.
- Built Stimulus controllers for modals, client-side validation, and dynamic admin-page behavior.
- Implemented file-upload features for employee and document-management modules using Shrine and CarrierWave.
- Contributed to a Django project: UI changes, MVC features, and POST endpoint testing with Postman.
- Managed version control, deployments, and staging updates with Git and Heroku.

Web Developer (Contract) | Azzurro Hotels **Mar 2026 – May 2026**
Remote · 3-month freelance contract, concurrent with Digiteer

- Built a backend admin dashboard tracking real-time site visits, CTA interactions, and other analytics for the marketing team.
- Built a dynamic color-palette rotation feature that tracked views and CTA click-through rate per palette to compare design performance.
- Ran A/B tests on live pages and used the results to guide design decisions with the marketing team.
- Built the homepage, landing page, blog, and a promotional page, and designed the site's color palette and visual direction.

Software Engineer | RAYA Solutions **Aug 2023 – May 2024**
Pasig, Philippines

- Integrated the Shopify API with ERPNext so online sales and orders flowed into one business system.
- Integrated the Google Workspace API with ERPNext to automate Excel file handling and reduce manual data entry.
- Migrated and validated legacy business data for import into a new ERPNext system.
- Wrote Python scripts to automate recurring server-side tasks; built pages with HTML, CSS, and Jinja.

Software Engineer Intern | SDOQC – DepEd **Sep 2022 – Mar 2023**
Quezon City, Philippines

- Built front-end layouts with Bootstrap in a Laravel (MVC) project and tested features with unit tests.
- Provided technical support and troubleshooting for ICT department staff and equipment.
- Taught senior high school interns the basics of operating systems, hardware, and front-end development.

Projects

Chronic Kidney Disease (CKD) Prediction System | *Django REST Framework, Vue 3, TensorFlow/Keras* | *github.com/nicetrybeni30/ckd-backend*
Web app that predicts a patient's chronic kidney disease risk from lab results, with a DRF backend, Vue 3 frontend, and separate patient and staff logins. Ran a full security and quality review of my own code and fixed missing input validation and an insecure logging setup before release.

Notion-Discord Task Bot | *Python, discord.py, Notion API* | *github.com/nicetrybeni30/notion-discord-bot*
Discord bot that lets a team create, rename, update, and close Notion tasks from chat commands. Fixed a race condition where simultaneous requests got the same task number by serializing task creation with asyncio.Lock, and added admin-controlled command permissions.

Education

Bachelor of Science in Information Technology **2019 – 2023**
Quezon City University, Quezon City, Philippines

Certifications

- Python – freeCodeCamp, Mar 2026
- Django Web Development – Udemy, Mar 2025
