Luxury Website Design Analysis

Sites that caught my eye — batch 1: luxury hotels.

Joseph R. Benipayo · Screenshots captured 30 October 2026

Lists:

Aman

Four Seasons

Rosewood

How this research works

What. The homepage and one property page of each brand, captured live from the brand's own website and analysed the same way as the hostel website audit: what you see first, how it is built, and what we can borrow.

How the screenshots were taken. Each page was opened in a desktop browser at 1440 × 900 and captured screen by screen, then joined into one long image. Cookie banners were hidden from the capture (not accepted). Sticky headers were hidden after the first screen so they don't repeat in the joined image, except on the Four Seasons Bora Bora page, where the sticky booking bar is part of the finding.

How to read the markers. Black numbered dots sit on the actual screenshot. The matching number in the notes below explains that spot. Numbers continue across a brand's pages.

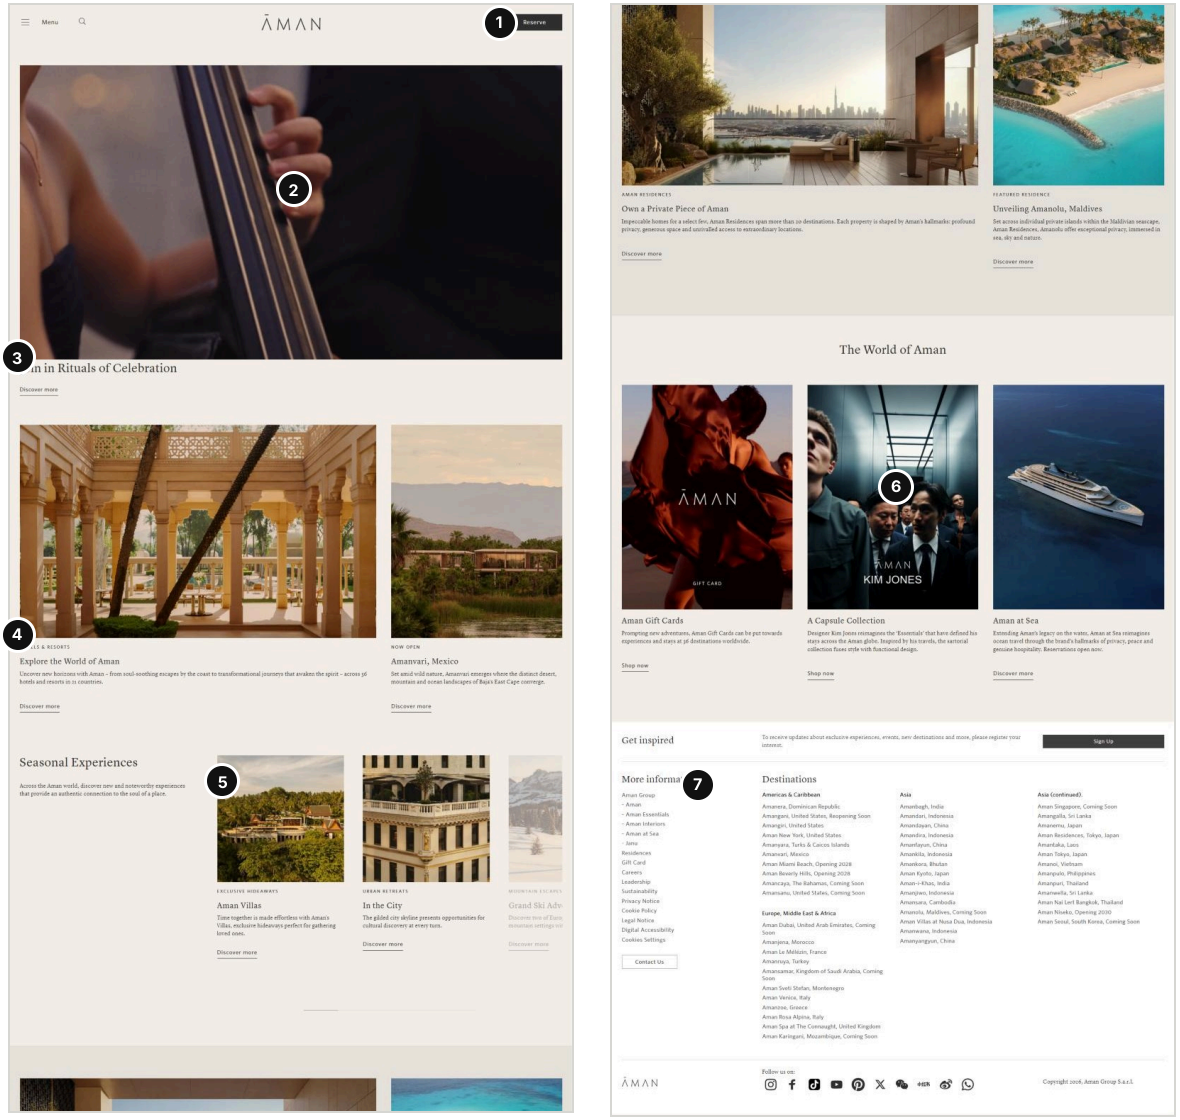

Ratings. My design assessment out of 10, not a measure of bookings or performance. Weights: visual hierarchy 25%, premium perception 25%, restraint 20%, image and type integration 15%, adaptability to our own designs 15%.

Usage. All screenshots are the brands' own material, kept here for research and reference only. They are not cleared for reuse in our designs.

LUXURY HOTELS · ULTRA-LUXURY

Aman

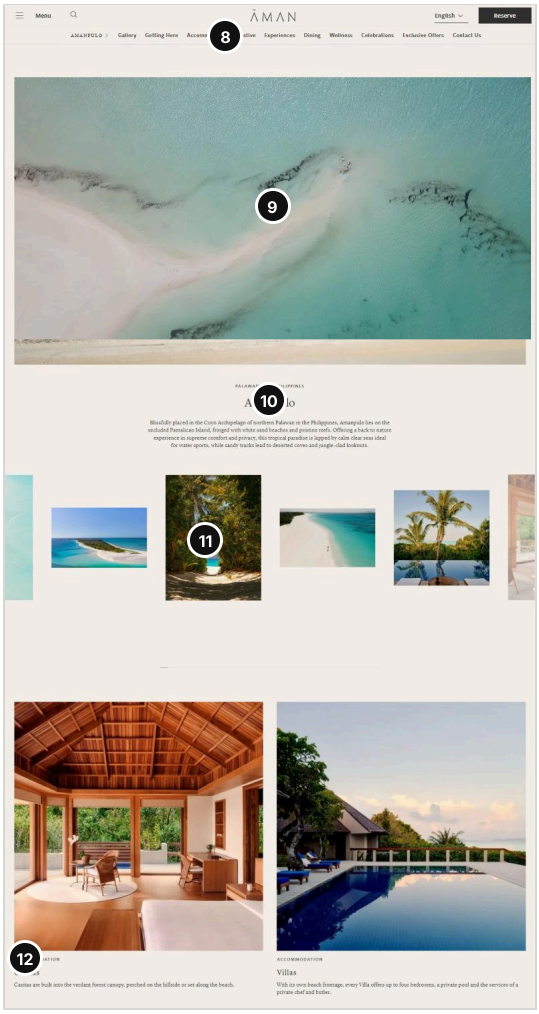

Resorts, hotels and residences · Homepage captured 30 Oct 2026

aman.com homepage, full scroll (left: top half, right: bottom half)

1. Thin, wide-spaced wordmark centred; only Menu, search and one dark Reserve button. Nothing else competes in the header.
2. Hero is a slow, close-up video (musicians' hands), inset with a margin on warm grey instead of running edge to edge.
3. The headline sits *below* the video, not on top of it, so the footage stays clean.
4. Every card follows one formula: small caps label, serif title, two lines, underlined “Discover more”. No buttons.
5. Seasonal Experiences: intro text pinned left, image carousel scrolling right, with a thin progress line instead of arrows.
6. The World of Aman: three tall portrait cards (gift cards, Kim Jones capsule, Aman at Sea), all with the same caption formula.
7. Footer lists every destination by region, with openings marked “Coming Soon”. The footer doubles as a site map.

AMAN · PROPERTY PAGE

aman.com/resorts/amanpulo, top three screens

8. A second, property-level nav appears under the main header (Gallery, Getting Here, Accommodation, Dining…).
9. Hero is an aerial shot of the sandbar and water. Place first, rooms later.
10. Centred caps location, serif property name, one short paragraph. Identical structure to the homepage cards.
11. Gallery strip with mixed image sizes and gaps, so it feels curated rather than gridded.
12. Accommodation in large two-up images with the same caps label and serif title.

URL: https://www.aman.com

The calmest site in this batch. Every page uses the same four parts (caps label, serif title, short paragraph, underlined link) and a single warm off-white background, so it reads like one long printed brochure. There is almost no colour except what comes from the photography.

What makes it feel expensive is what is missing: no prices, no badges, no pop-up offers, one button on the whole screen.

> **Steal this:** one repeated card formula (label · serif title · two lines · text link) across every section, on one warm neutral background.

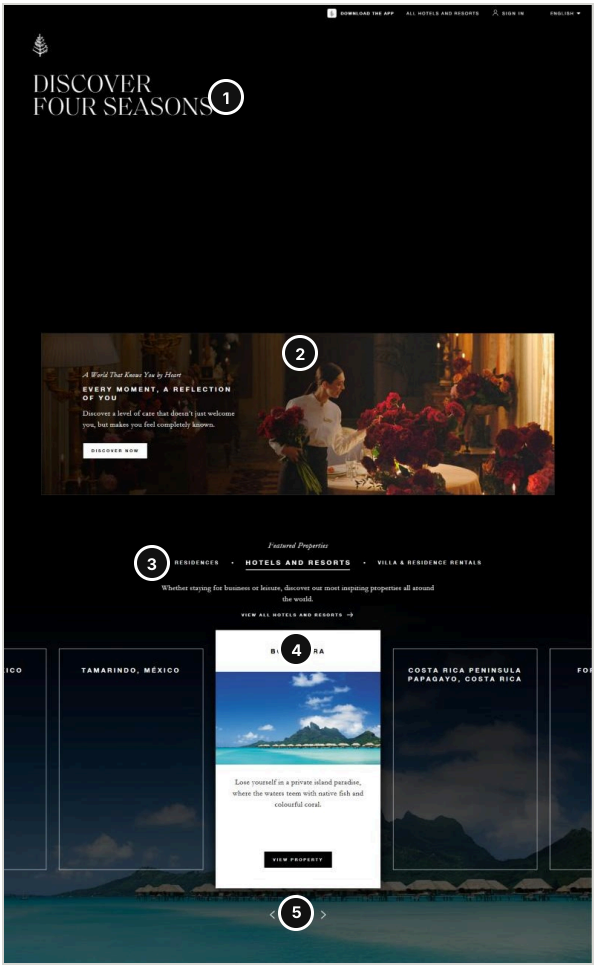

Hierarchy 25%	Premium feel 25%	Restraint 20%	Image + type 15%	Adaptability 15%	Inspiration rating
9/10	10/10	10/10	9/10	8/10	**9.3 / 10**

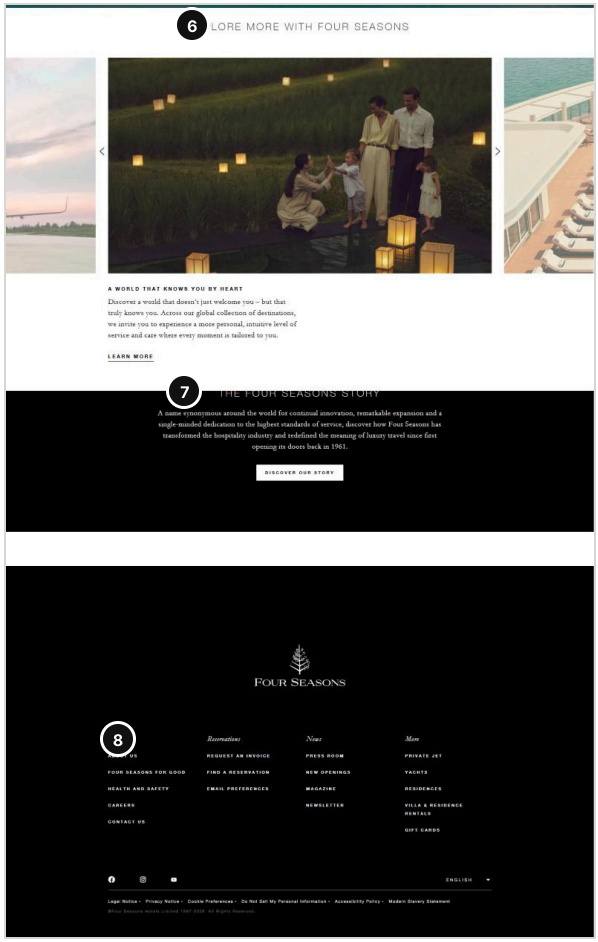

Strongest restraint of the three. Loses a little on adaptability: it needs very high-end photography.

LUXURY HOTELS · LUXURY

Four Seasons

Hotels, resorts and residences · Homepage captured 30 Oct 2026

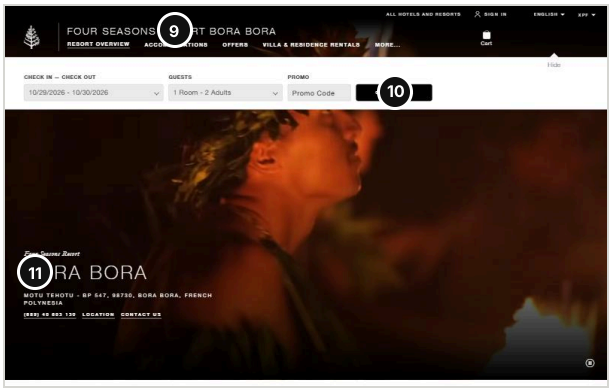

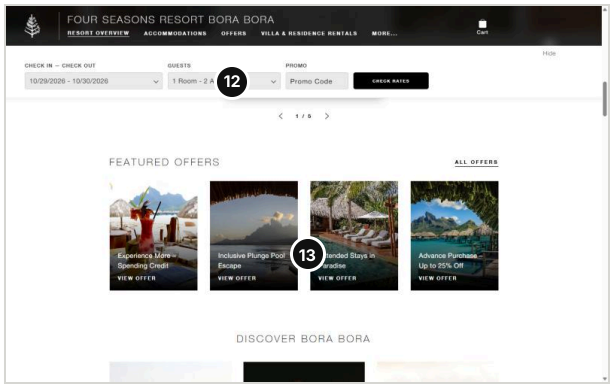

fourseasons.com homepage, full scroll (left: top half, right: bottom half)

1. Opens on black with a thin, all-caps serif headline ("Discover Four Seasons"). The top of the hero was black at capture; the video sits lower.
2. Video panel inset with margins, with a short italic line and a white outlined "Discover now" button.
3. Tabs (Residences · Hotels and Resorts · Villa rentals) let one section serve three audiences.
4. Property carousel: one white card over a full-bleed photo of the resort, other properties as outlined ghost cards.
5. Simple "1 / 9" counter with arrows, so you know how many properties are in the set.
6. Light, spaced-out caps heading and a peek carousel (next and previous images cut off at the edges).
7. "The Four Seasons Story" band in black: heritage told in four lines, with the first opening dated 1961.
8. Black footer with italic serif column titles (About, Reservations, News, More) over small caps links.

FOUR SEASONS · PROPERTY PAGE

Bora Bora page, first screen

Same page after scrolling: booking bar still pinned

9. Property name becomes the header, with its own nav (Overview, Accommodations, Offers, Villa rentals).
10. Full booking bar (dates, guests, promo code, Check Rates) directly under the header, before any content.
11. Italic script line “Four Seasons Resort” over a caps property name, then address and phone in small caps.
12. The header and booking bar stay pinned while you scroll. Same idea as Sociatel's sticky Book Now in the hostel audit, done more formally.
13. Offer tiles put the offer name directly on the photo, with a small “View offer” link.

URL: https://www.fourseasons.com

The most commercial of the three, and it shows. The homepage is dark and cinematic, but property pages switch into booking mode immediately: rates bar at the top, offers within two scrolls. Luxury in the visuals, efficiency in the structure.

The black-and-white system with thin caps type is very consistent, but the homepage hero rendering as empty black for the first screen is a risk on slower connections.

> **Steal this:** a pinned booking bar on property pages that stays visible through the scroll, styled in the brand's own colours.

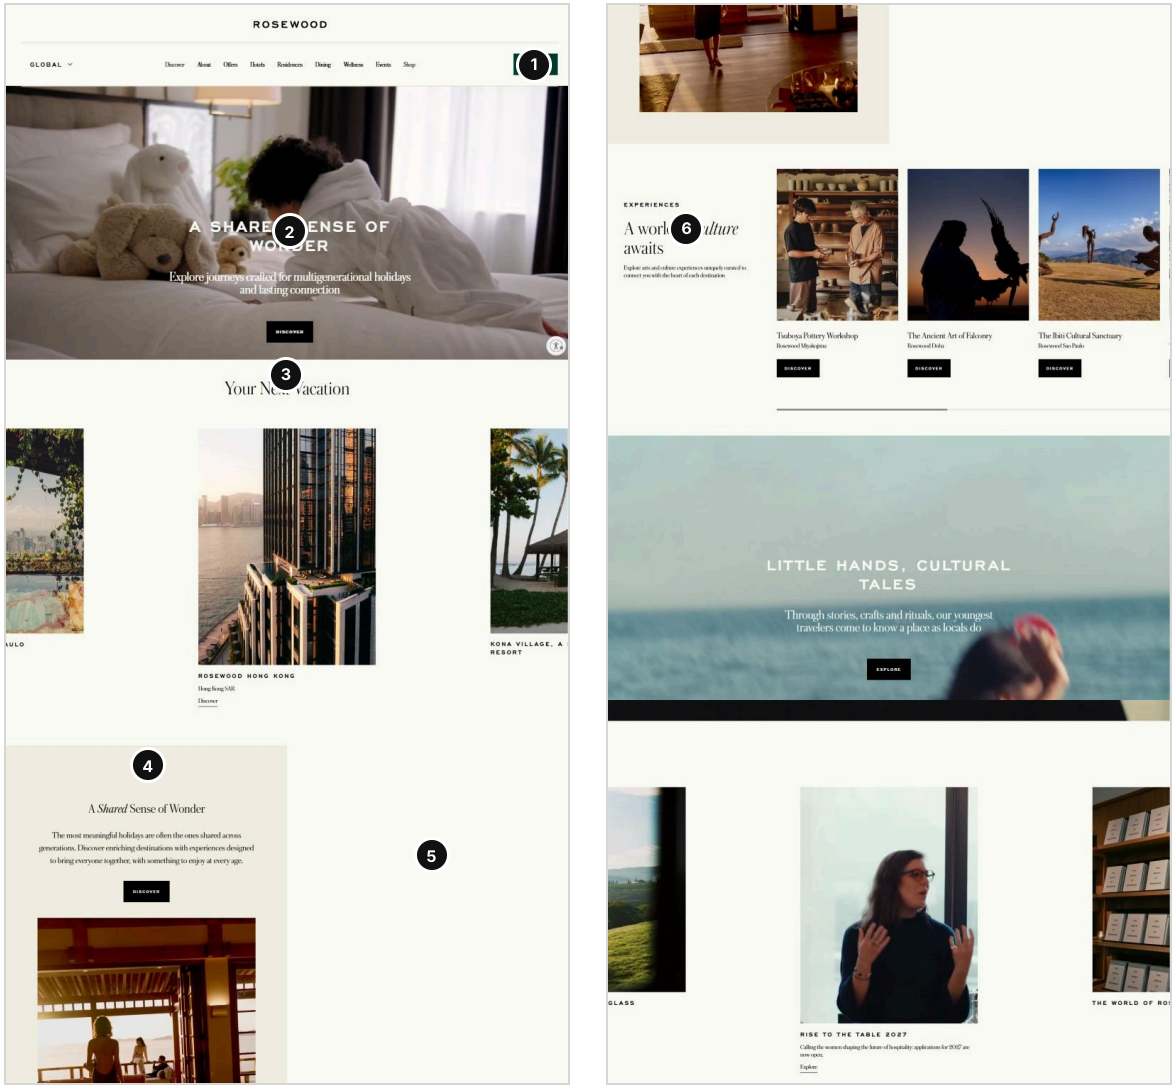

Hierarchy 25%	Premium feel 25%	Restraint 20%	Image + type 15%	Adaptability 15%	Inspiration rating
8/10	9/10	7/10	8/10	7/10	**7.9 / 10**

Best booking structure in the batch. Less restrained than Aman: more buttons, tabs and offers competing for attention.

LUXURY HOTELS · LUXURY

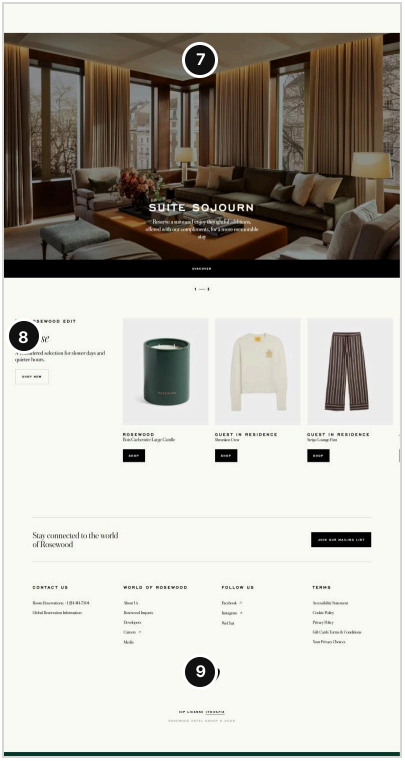

Rosewood

Hotels, resorts and residences · Homepage captured 30 Oct 2026

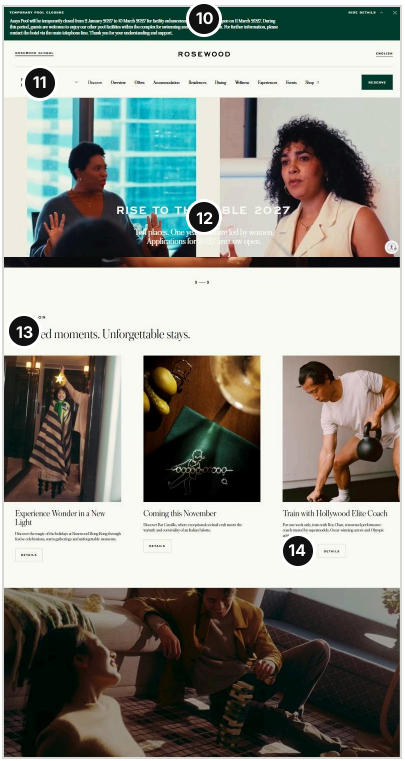

rosewoodhotels.com homepage, screens 1–6 (continued on next page)

1. Caps wordmark centred above a serif nav; Reserve is the only coloured element on the page (deep green).
2. Hero video with wide-spaced caps headline, a serif subline and one black Discover button.
3. "Your Next Vacation" centred carousel: one property in focus, neighbours peeking in from the sides.
4. Serif headline with one italic word ("A *Shared* Sense of Wonder"). The italic-accent trick repeats across the site.
5. The right half of this split section was blank at capture, likely an image still loading. A risk worth noting.
6. Experiences: "A world of *culture* awaits" with three photo cards, each with its own black Discover button.

Homepage, screens 7–9

Rosewood Hong Kong page, top three screens

7. Full-bleed room photo (“Suite Sojourn”) with the caps title set over the image and a full-width black Discover bar.
8. “The Rosewood Edit”: a shop inside the hotel site (candle, knitwear, lounge pants), product on grey tiles.
9. Footer: one serif line “Stay connected to the world of Rosewood” and the RW monogram in place of the wordmark.
10. Property alert bar (pool closure) in the brand green at the very top, dismissible.
11. Property name sits left of the local nav; Reserve keeps the same green button as the main site.
12. Hero: split video of the Rise to the Table programme. Storytelling first, rooms later.
13. “What's on” section with a confident serif headline (“Curated moments. Unforgettable stays.”).
14. Event cards pair an outlined “Details” button with a solid “Reserve” button, a clear primary and secondary action.

URL: https://www.rosewoodhotels.com

Editorial like Aman, with more energy: serif headlines with one italic word, wide-spaced caps labels, and one green used only for Reserve. It is also the busiest page, and the blank half-section at capture shows the cost of that.

> **Steal this:** one italic word per serif headline, and one accent colour used only for booking.

Hierarchy 25%	Premium feel 25%	Restraint 20%	Image + type 15%	Adaptability 15%	Inspiration rating
8/10	9/10	8/10	9/10	8/10	**8.4 / 10**

How they compare

Batch 1, based only on the captured pages

Brand	Background	Headline type	Primary button	Booking	Signature move	Rating
Aman	Warm off-white	Serif, sentence case	Dark Reserve, text links elsewhere	Reserve in header only	One card formula everywhere	9.3
Four Seasons	Black and white	Thin caps, light weight	Black or white solid	Pinned booking bar on property pages	Cinematic black hero	7.9
Rosewood	Ivory	Serif with one italic word	Deep green Reserve	Reserve in header; per-event Reserve	Italic accent word	8.4

Patterns all three share

Video or photography first, with type kept small. Small caps labels above serif titles. A single dark or single-accent button for booking. Long footers that act as a destination directory.

What not to copy directly

Aman's near-total absence of offers works because demand already exists; a hostel or mid-market hotel still needs visible prices and deals. Four Seasons' empty black hero relies on video loading fast. Rosewood's page length only works with a large library of photography and video.

Captured pages

Every screenshot in this batch, captured 30 October 2026, desktop 1440 × 900

ID	Brand	Page	URL	File
H001	Aman	Homepage, full scroll	aman.com	aman_home_full.png
H002	Aman	Amanpulo property, top	aman.com/resorts/amanpulo	amanpulo_top.png
H003	Four Seasons	Homepage, full scroll	fourseasons.com	fourseasons_home_full.png
H004	Four Seasons	Bora Bora property, 3 screens	fourseasons.com/borabora	fs_borabora_hero / rooms / offers.jpg
H005	Rosewood	Homepage, full scroll	rosewoodhotels.com/en/default	rosewood_home_full.png
H006	Rosewood	Hong Kong property, top	rosewoodhotels.com/en/hong-kong	rosewood_hk_top.png

All screenshots are the brands' own material, used here for research and reference only. Sites change often; these show the pages as they were on the capture date.
